

Don't let a Virus Close Your Business

How do you keep your business running when unexpected events keep your employees home?

The idea that you will send home your employees to be quarantined can be frightening for you and them. This goes beyond the fear of getting sick, but loss of revenue and wages is a real fear too.

Odds are most of your key people do their work on the phone and computer with services that are accessed via the Internet.

If you haven't planned or considered having employees work from home, you should. The benefits are real and can be easy to implement.

Customers of HostMyCalls can have the option to use their business phone services from home or on the road.

How?

- It could be as simple as taking their desk phone home and connecting it to the Internet to have seamless operation as if they were setting at desk in the office
- Users could have an option for a softphone to be installed on their laptop or home-based PC and forgo bringing home their desk phone from the office
- A second desk phone can be added in their home to mirror their office desk phone
- An app added to their cellular smart phone can be included as a mirrored extension to their office desk phone or forward their calls
- Provide a VPN service for the remote user allowing data networking to the office network

Your event may be something other than a virus. It could be a natural disaster, local utility event, fiber cut, major internet outage, building fire or flood. HostMyCalls is well equipped to help with your Business Continuity and Disaster Recovery efforts quickly.

Let us assist you in developing a plan to allow remote workers, whether it is work at home or varying locations. Solutions such as these for existing customers do not require a new contract and can be a temporary add-on until the crisis has ended.
