HMV Meeting comes with three types of meetings to give your organization solutions with video enabled communications supported on most devices used today. They can be hosted on demand or scheduled using the HostMyCalls Portal.

Each meeting type was created to provide relevant features and options for simple meeting selection. Whether starting a meeting on demand or scheduling for a future time, each meeting type is available.

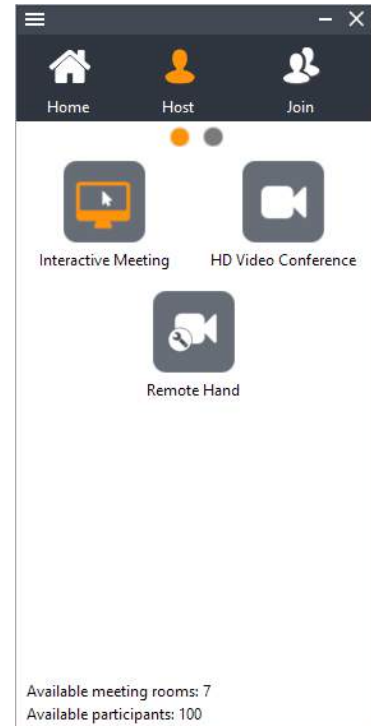

Interactive Meetings are designed primarily around sharing desktops and applications in a presentation format. Hosting a one to many is perfect for webinars, workshops, and classroom meetings.

HD Video Conferences start with the participants' pc camera video enabled and are designed to be a face-to-face meeting. While seeing each other face to face, file sharing and collaborating is allowed for all attendees.

Remote Hand meetings are perfect for customers with field personnel. Using the HD video camera of their mobile device, you will see exactly what your field users are seeing. Now you can talk, annotate, and interact using their video feed in real time.

With quick and easy installation, users can start hosting a meeting and invite others to join as attendees with a few simple steps. Attendees can choose to either join using their web browser or install the HMV client app allowing more features and control.
